

Hello SaveBCLP friends,

Thanks to all of you who rolled up your sleeves and dug into hard ground on October 23rd to help with the restoration project. The extended period of elevated reservoir levels in 2023 killed lots of native vegetation and introduced invasive plants. Our group focused on the area above Fisherman's Trail. Over 30 SaveBCLP volunteers teamed up with BCLP staff to place erosion control and plant hundreds of native shrubs, trees and grasses. Lots of invasive plants were also removed.

This is the second year Save Bear Creek Lake Park has teamed up with BCLP staff to help with needed projects. While our primary purpose is to resist the reallocation proposal, we want to help the park thrive and look forward to future volunteer opportunities.

Happy Trails,

Katie Gill
Director, Save Bear Creek Lake Park
